

Prize Manager

THE PRACTICAL ORGANIZER GUIDE

Team Prizes Organizer Guide

Configure institution awards and verify the counted players before declaring a winner

Think of it this way

Each player competes in the normal individual chess tournament. Prize Manager groups players by school, academy or another chosen field, selects the players who count, adds their tournament points and ranks the eligible institutions.

BOTH PRIZES CAN BE WON A player may win an individual prize and also contribute to their institution's team award. The two allocation systems are separate.

Your complete route through the app

Set rules → Add award rows → Import and verify players → Run preview → Check eligibility and ties → Finalize and publish.

The pictures are actual Cloud Browser captures from an authorized, unpublished synthetic demo on 10 October 2026. Each red number marks the next control to click. The conditional Resolve Tie screen is still awaiting an authentic capture.

Reviewed edition 10 October 2026 | Source revision 4bd04a0 | Authentic tie capture blocked

Completion status

The recovered captures show the organizer workflow through saved Finalize. This reviewed edition preserves those captures. Resolve Tie and Save Resolution remain source-verified only; the screenshot requirement is still incomplete.

Before you start

- Create or open your tournament in Prize Manager with an organizer account that can edit the tournament.
- Prepare the FINAL individual ranking/player spreadsheet; do not use a pre-tournament registration list if it has no final scores.
- Confirm every player has a unique final Rank, a usable Points or Pts value, and the institution label in a supported field.
- Use one consistent institution spelling: “Delhi Public School” and “DPS” are different group keys unless cleaned.
- Decide the published award rule: top 4, open or with a girls minimum, and how many prize places you will give.

The four columns that matter

Column / example	Why it matters
Rank / 1, 2, 3...	Chooses which players count. The engine selects by best individual rank first.
Pts / 6.0, 5.5...	Adds the counted players' points to the team total.
Club OR Team / e.g., Modern School	This becomes the team key. Choose the matching Group Players By option.
Sex, fs or Gender / F	Needed only if your rule requires girls. F must be explicitly recorded.

School and Club map differently. The recognized School header maps to Team; Club maps to Club. Choose the same field in Group Players By. The manual mapping dialog does not offer Team or Points selectors, so use recognized headers and verify the imported data and team preview.

What is NOT required Teams do not register separately. There is no manual team registration or captain selection in this automatic mode.

A safe example spreadsheet

Rank	Name (fictional)	School	Pts	Sex
1	Asha	Cambridge School	7.0	F
2	Rohan	Cambridge School	6.5	
3	Zoya	Modern School	6.0	F
4	Aman	Modern School	5.5	

This is a teaching example, not a real player list. Your tournament needs enough players per school to satisfy the chosen team size.

Step 1 Open Team Prizes

- Sign in at prize-manager.com and open the correct tournament.
- Open Tournament Setup and select Prize Structure. The setup address ends in /setup?tab=prizes.
- Find the Prize Mode selector above the prize editors.
- Click Team Prizes at red number 1. Your saved individual prizes remain available under Individual Prizes.

1 Click Team Prizes in the Prize Mode bar.

IF YOU CANNOT SEE IT Make sure you are on the Prizes tab, not the Details tab. A viewer without edit rights may see the page without add/edit controls.

Step 2 Start a Team Prize Group

- On the Team Prizes screen, look at the upper-right corner.
- Click Add Team Prize Group at red number 2. The Rules drawer opens on the right.
- A “group” means one kind of team award. For example, “Best School” and “Best Academy” are separate groups with potentially different rules.

2 Click Add Team Prize Group. The new group is not created until its rules are saved.

The free small tournament editor allows one active team group. The current limit is a client-side check. The captures use a Master account and do not demonstrate the free limit.

Step 3 Fill the rules

For the captured example, use Best School Demo, Club / institution field, Team Size 4, Girls minimum 1 and Other players minimum 0.

Add Team Prize Group ×

Configure how teams are formed and scored.

Group Name

Best School Demo

Group Players By 3

Club / institution field ▼

Uses the club field from player data

Team Size

4

Number of players counted per team for scoring.

Gender Requirements Optional

Girls on the team (minimum)

1 ▲ ▼

Counts only players recorded as female in the player list.

Other players (minimum)

0 ▶ ▲ ▼

Counts every player not recorded as female — including players whose sex was not recorded.

Examples:

- Team of 4, minimum 2 girls, minimum 2 other players → the team must

3 Open Group Players By and choose the field containing the institution names.

RULE CHECK Girls minimum + Other players minimum cannot be more than Team Size. These are minimums, not a fixed gender composition.

IMPORTANT LIMITATION There is NO separate “Minimum roster size” box in the current editor. Today an institution must have at least Team Size players. A rule such as “8 entrants, count best 4” cannot yet be configured here.

Step 3 Check every field and create the group

Field you see	What to enter / what changes
Group Name	e.g., Best School Championship. This name appears on results.
Group Players By	Pick Team for an Excel "School" column; pick Club / institution field for a Club column. City or State only if that is the real award rule.
Team Size	e.g., 4. The system counts four players per eligible institution.
Girls on the team (minimum)	0 for open; 1 to require at least one player recorded F; 2 to require two.
Other players (minimum)	0 unless the rule requires players not marked F. A blank gender is accepted here.
Scoring Mode	Sum of Top-K Scores is the sole available scoring mode. The menu is disabled.

When the fields are correct, scroll to the bottom of the drawer and click Create Group at red number 4. Creating the group saves its rules.

4 Click Create Group after checking the rules. The disabled scoring menu currently offers Sum of Top-K Scores.

The captured group was created successfully. Saving the group does not create or save the award rows.

Step 4 Add and save the awards

The group rule decides who qualifies; the prize rows decide what each winning institution receives.

- Find the card bearing the new group name. Click its name if the prize table is collapsed.
- Click Add Prize at red number 5.
- For Place 1, enter Cash (₹), tick Trophy or Medal if applicable, and keep Active checked.
- Repeat for Place 2 and Place 3. Use a zero cash amount only when a trophy or medal is ticked.
- Click Save Prizes at red number 6. Wait for confirmation before leaving the page.
- Refresh the page and reopen the group. Confirm the rows are still present.

5 Click Add Prize on the expanded Best School Demo card.

6 Click Save Prizes after entering the first award. Reload confirmed ₹10,000, Trophy and Active persisted.

Example award setup

Place	Cash	Trophy	Medal
1st	₹10,000	Yes	No
2nd	₹5,000	Yes	No
3rd	₹0	Yes	No

DO NOT MISS THIS Create Group saves the rules; Save Prizes saves the actual awards. These are two separate actions. The “Unsaved changes” text means the award table has not been saved.

ON/OFF SWITCH The switch next to a team group name controls whether that entire group is active. Individual award rows also have an Active checkbox. An inactive group or row does not award a prize.

Step 5 Import the final player results

- Go to Import Players for the same tournament.
- Upload the ranking spreadsheet (Excel / Swiss-Manager export). If you imported players before the tournament, update them with final Rank and Pts.
- Recognized headers can map automatically. If Map File Columns opens, inspect the selectors before confirming.
- For the tested Club workflow, use the headers Rank, Name, Pts, Gender and Club. In a manual dialog, select the final-rank column at red number 7; check Name, Gender and Club, then click Confirm Mapping at red number 8. Points and Team have no selector in this dialog.
- If you require a girls minimum, confirm Sex/fs/Gender is mapped to Gender and female players show F after import.

7 If the mapping dialog opens, select the final-rank column. This deliberate example uses the unusual header Finish Position Demo.

Step 5 Confirm mapping and import

Club
Chess club or organization

Club
Independent Demo, Cedar Demo ...

Group (Gr)
Swiss-Manager Gr column for category grouping (e.g., PC for differently-abled)

Skip this field

Type
Swiss-Manager Type column for section/category codes (U14, F11, S55, etc.)

Skip this field

Disability
Disability type (e.g., Hearing, Visual)

Skip this field

Special Notes
Special requirements or accommodations

Skip this field

Unrated
Whether player is unrated (Y/N)

Skip this field

Cancel Confirm Mapping

8 Click Confirm Mapping after checking the available fields. This dialog was captured but cancelled; the final demo import used the recognized headers listed on the preceding page.

- Review the validation preview, then click Import players & continue at red number 9. After import, verify scores and institution grouping against your spreadsheet and the team preview. Do not use Replace existing players unless you intend to replace that tournament's entire player list.

Back Import players & continue

9 Click Import players & continue after the player preview reports no errors.

Girls minimum counts explicit F values after normalization. Blank or unknown gender can satisfy Other players minimum but cannot satisfy Girls on the team minimum.

SPOT CHECK Compare 3–5 known players with the official standings: name, Rank, Pts, School/Club and F. Fix errors before awards.

School names and common import mistakes

Spreadsheet cell	What happens
"DPS" vs "Delhi Public School"	Two different team names, even if both mean the same school.
Blank School / Club	That player is left out of institution grouping.
School data imported into Team; rule is set to Club	The team prizes may find no eligible teams.
Pts blank across a file	Points totals can be uninformative; the app may report rankings based on rank sum.

Step 6 Preview and check the winners

- The requested Review & Conflicts stage is labelled Review Allocations in the live app; its breadcrumb says Review & Allocate. Click Preview Allocation at red number 10.
- Wait until the preview completes; the Team / Institution results become available for active prize groups.
- Open the Best School result card. Read each institution's place, counted player names, Points, Rank Sum and Best Rank.
- Expand ineligible teams at red number 11 to read the organizer-only explanations.
- If any result disagrees with the official ranking, return to data/rules, correct it and preview again.

10 Click Preview Allocation on Review Allocations.

The demo imported 12 players with no errors: 3 F and 9 M. Preview showed two eligible teams and one team award. Cedar Demo School received the configured ₹10,000 trophy award.

Step 6 Read the selected players and exclusions

Place	Team	Points	Rank Sum	Best Rank	Prize
1st	Cedar Demo School Cedar Demo Player 1 (#2), Cedar Demo Player 2 (#4), Cedar Demo Player 3 (#6), Cedar Demo Player 4 (#8)	21	20	#2	₹10,000 🏆
^ 2 ineligible teams • Pine Demo School — 3 players: Fewer players than the team size. • Independent Demo — 1 player: Fewer players than the team size.					

11 Expand ineligible teams to inspect the organizer-only reasons. Cedar has 21 points, rank sum 20 and best rank 2.

Why a team may be ineligible

Message in the app	Action for organizer
Fewer players than the team size.	Check institution names and roster count; a school with 3 players cannot score in a Top 4 group.
The rule asks for a minimum number of girls...	Check imported F markers and the published girls requirement.
The rule asks for other players...	Check the other-players minimum and player gender values.
No eligible teams found	Inspect group-by mapping, team size and gender requirements.

Exclusion explanations appear in the computed Review preview. The saved Finalize view can omit them and can report eligible teams as the number of saved winners. Do not interpret that count as the full eligible roster. Public results and printed documents exclude the private list.

Observed exclusions: Pine Demo School has three players; Independent Demo has one. Both are below Team Size 4. Maple Demo School is eligible. Only Cedar is displayed as a winner because the demo configured one prize place.

Step 6 Commit the checked allocation

Commit only after the preview matches the official standings and any individual conflicts have been handled.

12 Click Commit Allocation after the review.

The reviewed demo then enabled Finalize. This action creates a saved allocation version; it does not itself publish public results.

13 Click Finalize at the bottom of Review Allocations.

The demo finalized as version 1. It remains unpublished with zero active publications. No live tournament was edited.

Step 7 Review Finalize and any ties

- Under Final Prize Views, select Team Prizes at red number 14 and check the institution winners again.

Final Prize Views

Export XLSX Print

Category Cards Poster Grid Arbiter Sheet **Team Prizes**

Team Prizes 1 group 1 winner • ₹10,000

Team prizes are allocated separately from individual prizes. Players can win both individual AND team prizes.

Best School Demo

Grouped by: Club / institution field Top 4 players Rule: at least 1 girl 1 eligible team

1 winner • ₹10,000

Place	Team	Points	Rank Sum	Best Rank	Prize
1st	Cedar Demo School Cedar Demo Player 1 (#2), Cedar Demo Player 2 (#4), Cedar Demo Player 3 (#6), Cedar Demo Player 4 (#8)	21	20	#2	₹10,000

14 Select Team Prizes under Final Prize Views. The saved demo winner matches the preview.

- Print is available in the observed Team Prizes tab; Export XLSX is disabled there. Check the final output before publishing. Publish Tournament creates public results and was not clicked in this demonstration.

The Finalize summary cash totals at the top of the page cover the individual awards in this demo; verify the ₹10,000 team award in the Team Prizes card itself.

Step 7 Resolve a true tie when the control appears

- Conditional workflow, verified in source only: if Tie detected appears at a prize boundary, click Resolve Tie. The demo does not expose that control, so no tie-resolution screenshot is included.
- The source dialog allows you to confirm the proposed ordering or reorder the teams. A reason is required when the order changes. Click Save Resolution. This save was not exercised in the captured demo.

Capture still required

No reconstructed tie screen is included. The recovered demo has equal team points but different rank sums and best ranks, so it displays no Resolve Tie button. The current importer rejects duplicate ranks. With unique ranks and separate institution rosters, two teams cannot share the same best individual rank required by the frontend tie check.

Continuation check: the Cloud Browser showed the organizer sign-in page on 10 October 2026; the previous session was unavailable. No tournament data was changed in this continuation. A safe genuine tie was not produced, and no tie save was attempted.

Where team awards appear

Print and publication checks

After reviewing Team Prizes in Final Prize Views, click Print. In the browser print preview, check institution names, places, cash and trophy or medal markers, counted players and page breaks. Save to PDF or print after those checks. The recovered demo did not open print preview; this sequence is source-supported guidance.

When your official results are approved, use Publish Tournament on Finalize Allocations. Open the resulting public results link and check the team awards at `/p/{slug}/results`; the tournament details landing page need not show them. Publishing was not exercised in the demonstration. A new player or rule change requires preview, review and a saved allocation before the publication is updated.

Place	Purpose
Review Allocations	Preview of ranked institutions, selected players and private exclusions.
Finalize Allocations	Review of team awards and tie-resolution workflow.
Official PDF / print	Team award section where supported; private ineligibility list excluded.
Public tournament results	Public results route <code>/p/{slug}/results</code> shows team awards. The details landing page need not show them.

PAYMENT / ACCESS On some unpaid non-free-tier previews, top team places can be masked until tournament access is unlocked. This is not an absence of calculated results.

Worked examples

Example A Any four players

Rule: Group by Club; Team Size 4; Girls min 0; Other min 0.

School	Players entered	Four counted scores	Result
Modern School	7	$6.0 + 5.5 + 5.0 + 4.5 = 21.0$	Eligible (if these are the best-ranked four)
DPS	3	$7.0 + 6.5 + 6.0 = 19.5$	INELIGIBLE: only 3 players

Why: DPS cannot win a Top 4 team prize with only three entrants, however high the three scores are. Modern School leads these two institutions.

Example B A girls minimum changes eligibility

Rule: Team Size 4; Girls min 1; Other min 0.

School	Candidate four players	Total	Result
St. Xavier's	7.0 M, 7.0 M, 6.0 M, 6.0 M	26.0	INELIGIBLE: no F recorded
Cambridge School	5.0 M, 5.0 M, 5.0 M, 4.0 F	19.0	ELIGIBLE; wins among these teams

If the girls minimum changes from 1 to 0, St. Xavier's becomes eligible and would rank ahead of Cambridge School.

Example C Equal points

School	Team points	Rank Sum	Best Rank
School A	21.0	35	2
School B	21.0	40	1

School A ranks higher: equal points are followed by the lower Rank Sum, then the lower Best Rank. The true-tie control requires equality across all three values at the prize boundary. Equal points alone do not trigger Resolve Tie.

With both gender minima at zero, selection takes the best K players by tournament Rank and adds their Points. With minima configured, the best-ranked players satisfying each minimum are selected first; remaining boards go to the best-ranked unselected players. The engine does not independently choose the K largest Pts cells.

Examples A and B are source-verified teaching cases, not screenshots of live tournament outcomes. The observed demo also scored Cedar and Maple at 21 points; Cedar's rank sum 20 beats Maple's 24.

Best Academy and mixed team examples

Best Academy using a separate institution field

Use recognized School and Club columns if the same player belongs to both a school and an academy. School maps to Team; Club can hold the academy name. Configure Best School with Group Players By set to Team and Best Academy with Club / institution field. Confirm both imported fields before using this arrangement; this dual-field example was not exercised in the recovered demo.

For Best Academy, set Team Size to 4 and both gender minimums to 0. Lotus Academy enters six players. Its four best-ranked players score 6, 5.5, 5 and 4.5 points: total 21. River Academy enters four players scoring 6, 5, 4.5 and 4: total 19.5. Lotus ranks higher. A third academy with only three entrants is ineligible for this rule.

A regulation requiring eight academy entrants while counting four is not enforced by the current editor. Minimum roster size is approved but unimplemented. Do not describe the automatic award as compliant with that regulation; seek an agreed process from the chief arbiter before declaring it.

Mixed team with both minimums

Set Team Size to 4, Girls on the team (minimum) to 1 and Other players (minimum) to 1. These two minimums leave two unrestricted places.

Example institution: rank 1 M with 7 points; rank 3 M with 6.5; rank 5 M with 6; rank 8 F with 5; rank 10 F with 4. The selector first reserves rank 8 for the girls minimum and rank 1 for the other minimum. It fills the remaining places with ranks 3 and 5. Counted team: ranks 1, 3, 5 and 8; Points 24.5; Rank Sum 17; Best Rank 1.

The institution remains eligible with more girls than the minimum. If it has no explicit F, it is excluded even with four high-scoring players. If it has only F players, it cannot meet Other players minimum 1. Blank or unknown gender can meet Other players minimum, so this control cannot enforce a verified boys-only requirement.

These are teaching examples derived from the current selection rules. They are not additional captured tournament outcomes. Two active groups may require access beyond the free small-tournament limit.

Problems and fixes

You see...	First thing to check
The Add Team Prize Group button is grey	You may have reached the free-tier one-active-group limit or lack edit permissions.
A school with strong players is missing	Does the selected Team/Club field match the imported column? Has it got at least Team Size players?
A school that has girls fails its girls rule	Check that those players were imported with an explicit F.
No team points / all 0	Use recognized Pts or Points headers; check imported values and the team preview. The manual dialog has no Points selector.
A prize row vanished	Click Save Prizes and verify persistence after refreshing.
Cash = 0 row cannot save	Tick Trophy or Medal, or enter a positive cash amount.
Two schools are shown in the wrong order	Check score, Rank Sum, Best Rank, and whether a Resolve Tie review is required.
The organizer wants 8 registered players, count best 4	Current screen does not offer that minimum roster setting; do not advertise the result as enforcing this rule.

Final checks before declaring Best School

- ☐ Final official Rank imported
- ☐ Final Points/Pts imported
- ☐ School/Club/Team field mapped correctly
- ☐ Institution spellings cleaned
- ☐ Team Size matches the announced regulation
- ☐ Girls/Other minima match the announced regulation
- ☐ Every prize row saved and active
- ☐ All unexpected exclusions checked
- ☐ All boundary ties reviewed/resolved
- ☐ Final print and public view reviewed

A chess regulation always wins The organizer/arbitrator is responsible for deciding the award rule in advance. Prize Manager applies its configured rule; it cannot infer your tournament regulations.

Accuracy notes and current limitations

This edition reconciles canonical main at 4bd04a03e11953d3c08029b09bf52f206aa65d79 with the recovered guide and its 10 October 2026 captures. Screenshots retain the recovered crops and numbered red outlines. This continuation did not independently repeat the signed-in workflow; the production deployment commit was not established.

What the product does today

- Automatic grouping by Team, Club, City, State, Swiss Group or Swiss Type fields.
- Ranking based on selected players' imported Pts, with rank-based team selection and rank-based tie-breaks.
- Optional minimum girls and "other players" slots; no separate team registration.
- Observed team preview and saved Finalize view. Public and printed team outputs are supported by source; they were not published or exported during this demonstration.

What you must not assume

- A separate `minimum_roster_size` control exists: approved in the team PRD, but not implemented in the current form or scorer.
- An imported "School" column automatically means Club: current aliases map School to Team.
- All girls can be inferred from names, or that blank gender means a girl: only explicit F counts.
- The one-group free limit is a backend security enforcement: the checked gate is client-side.
- Resolve Tie and Save Resolution have not been captured or exercised. Their labels and conditional behavior are verified in source. A normal import with unique final ranks cannot meet the frontend condition requiring the same best individual rank for different institutions.

Verification record

Canonical main and the attached guide share source revision 4bd04a0. The older `PROJECT_STATE` baseline was 251101b. Team scoring and tie components were unchanged between those revisions; recent import changes were inspected. `SOURCE_OF_TRUTH.md`, `BACKLOG.md` and `DOCUMENT_INDEX.md` are absent from the canonical tree.

The recovered verification record reports 12 players, a saved finalized demo and zero active publications. That database observation was not repeated in this continuation. Publish, public results, print output and tie resolution remain unexercised.

The DOCX and PDF are available as a reviewed edition with an explicit limitation. The requested authentic tie-resolution capture remains blocked.

Capture provenance

All screenshots were captured from prize-manager.com in Work's Cloud Browser on 10 October 2026. The fictional tournament was Team Prizes Guide Demo 10 Oct 2026. Crops keep the relevant native controls; annotations add only red numbered outlines. No mock screen or reconstructed dialog appears in this edition.

Source and live evidence are kept separate throughout the guide. The source references above are pinned to the reviewed commit so later code changes can be reconciled without changing this edition's evidence.

Next exact action

Next action: provide an authorized isolated fixture that genuinely reaches Resolve Tie in the unchanged app. Capture the button and Save Resolution dialog, verify the workflow, update this limitation and re-render the guide. If no valid fixture exists, the owner must decide how to address the unreachable condition before the screenshot can be completed.
